

Our Experience at Brighter Future

*Patient: Case, Age 5
Written By Mother*

Pre-Vision Therapy Experience:

Case had an IEP since preschool and started speech therapy for Childhood Apraxia of Speech at 2 years old. In preschool he also needed OT for large and fine motor issues. He had a difficult time focusing and sitting still and often needed frequent breaks in school during assessments. He had a very difficult time writing and would get very frustrated trying to draw a "C" and not being able to do it. As a result, he had a negative self-image and didn't feel very confident. He would act out and have melt downs fairly frequently, especially right after school.

Computerized Vision Therapy Experience:

Case was excited to do the home therapy at first, but then tired of it quickly. He now enjoys the more fun computer games that he gets to play. He always enjoys seeing the therapists in the office and playing games with them.

Post Therapy Experience:

Case's writing has improved dramatically and his ability to sit through school and focus has improved as well. As a result, he seems more confident and not as frustrated with school. We had a wonderful experience with everyone at BFVC and would highly recommend BFVC to others who have similar issues.
