

Our Experience at Brighter Future

*Patient: Kami, Age 5
Written By Mother*

Pre-Vision Therapy Experience:

Kami's eyes would cross a lot when focusing up close. This made it difficult to read, write, and play games on the Kindle for extended period of time.

Computerized Vision Therapy Experience:

I felt the computerized therapy was great. Kami had a lot of fun playing the different games. The only hard part was getting it done 2 times a day. She just wasn't motivated enough before school to do it.

Post Therapy Experience:

I feel that through VT Kami has made progress. I don't notice her eyes crossing as much. I don't know at this time if she will need more therapy but feel it definitely helped her. I was happy with the program and felt they communicated well with what was going on.
