1 Session of Vision Therapy

How Vision Therapy Helped Me!

Before vision therapy I had a hard time focusing up close. My eyes liked to cross. It made it hard to play games on my Kindle.

Doing the activities and playing games during vision therapy helped my eyes to start getting better. I am now reading books easier at school and have become a great reader.

My eyes don't get tired so easy which lets me do more stuff on my computer and read longer and easier.

I had fun playing games and doing all the activities at vision therapy. My favorite thing do with the therapists was playing the bird game. At home I really enjoyed playing Feed Fribbit Colors.

Having fun games to play at home was a good reward for me to have after doing my other vision therapy homework. The activities made my eyes get stronger and the activities became easier after doing them for a while.

I enjoyed vision therapy and all the people at Brighter Future Vision Clinic. I'm glad they could help my eyes start to get better.
