

Our Experience at Brighter Future

Patient: Leann, age 13

Written by Mother

Pre-Vision Therapy Experience:

Before starting vision therapy, Leann struggled with her schoolwork and had a very low accuracy rate. She was also slow in getting her work done.

Computerized Vision Therapy Experience:

The computerized vision therapy program was very simple to do at home. It really took the pressure off of me, allowing Leeann to work independently. Leann thought the program was fun to do, which make it easier.

Post Therapy Experience:

Leeann has not only become quicker at doing her school, but has also become more accurate. She has also become more confident in her work as well as around other people. I will definitely recommend Brighter Future Vision Therapy to others.
