

## My Vision Therapy Experience

Before I did Vision Therapy, My eyes would blur when I looked up after looking down for thirty minutes and more. When I read out loud I would say a different word for the one I was reading. I was really slow in school and made a lot of errors on my schoolwork. Spelling was also hard and took a long time.

Therapy was hard when I first started but it got easier as I went on, it is still challenging in certain things but not like it used to. Everyone in the Therapy office are nice and fun and like to joke around a lot.

Now I can read all day and my eyes won't blur as much. I don't have as many errors on my schoolwork like I use too and I get my school done really fast. I don't read the wrong word anymore and I get my spelling test done in a flash and get 100% most of the time.
