

Our Experience at Brighter Future

Patient: Megan, age 13

Written by Mother

Pre-Vision Therapy Experience:

Prior to starting vision therapy, Megan struggled with reading, spelling, reading aloud, headaches, accuracy in school, as well as a slow processing speed.

Computerized Vision Therapy Experience:

The computerized vision therapy program was very nice for our family. We were able to incorporate it into our home schooling with ease; it was also fun for Megan. Vision therapy quickly became a part of Megan's daily routine.

Post Therapy Experience:

I have definitely seen improvements across the board for Megan. Amazingly, Megan can read aloud with much greater ease; she is reading up a storm more quickly and accurately; her error rate in school has improved; and her headaches have practically disappeared. I even feel that Megan's self-confidence has increased. I definitely recommend Brighter Future
