

Our Experience at Brighter Future

Patient: Zina, age 10

Written by mother

Pre-Vision Therapy Experience:

Well, first she had glasses which was a struggle for her to wear. I was told that she only had a left lazy eye. We tried strengthening it by wearing a patch over the right eye. Then I started wondering about her abilities being compromised. She had a hard time with left and right. Some things addressed after her screening were things I thought were just her personality, i.e. needing a break every 2 or 3 minutes of homework, or having so much trouble keeping writing to the left or lining up math problems.

Computerized Vision Therapy Experience:

The home therapy usually wasn't too much to enforce. Following a rhythm really helped her in the mornings. Sometimes weekends got away from us but eleven minutes was totally doable and Zina seemed to enjoy all of it (except when doing VT during a sleepover.)

Post Therapy Experience:

I received adequate information about the process, and what we were hoping to achieve for Zina. I have recommended you all to a few of my student's families. Zina's work has improved already. I am not sure yet if it will "hold" and hopefully there are things we can do at home to keep her strengthening.
